Attachment Theories Psychologists have proposed two main theories that are believed to be important in forming attachments. The learning / behaviorist theory of attachment (e.g., Dollard & Miller, 1950) suggest that attachment is a set of learned behaviors. The basis for the learning of attachments is the provision of food.

### Attachment Theory | Simply Psychology

Attachment is the emotional bond that forms between infant and caregiver, and it is the means by which the helpless infant gets primary needs met. It then becomes an engine of subsequent social....

### Attachment | Psychology Today

There are many notable examples of psychological theories with evolutionary bases, such as Bowlby’s (1969) model of attachment, yet these are often isolated examples. In the last three decades, the evolutionary perspective has been reinvigorated with considerable theoretical advances and a continually growing array of empirical studies.

### Evolutionary Theory and Psychology

Some schools of psychology are almost strictly Darwinian, such as ethological psychology (the most famous 20th century ethological psychologist is Konrad Lorenz) and evolutionary psychology. Even though Darwin was not a psychologist, his theories have had a large and lasting impact on the field of psychology.
