Inclusion bodies (IBs) are cytoplasmic sites of RNA synthesis for a variety of negative-sense RNA viruses, including Ebola virus. In addition to housing important steps in the viral life cycle, IBs protect new viral RNA from innate immune attack and contain specific host proteins whose function is under study.

Bacteriology is a branch of microbiology that is concerned with the study of bacteria (as well as Archaea) and related aspects. It's a field in which bacteriologists study and learn more about the various characteristics (structure, genetics, biochemistry and ecology etc) of bacteria as well as the mechanism through which they cause diseases in humans and animals.

Bacteriology - Definition, Classifications and in Medicine
Microbiology includes various sub-disciplines like virology, bacteriology, Parasitology and mycology. The study of microbiology is highly important for identification of pathogenic organisms and elucidating the pathogenic pathways followed by them so that it may help in the development of treatment methods against them.
