180 Days of Geography is a fun and effective daily practice workbook designed to help students learn about geography. This easy-to-use third grade workbook is great for at-home learning or in the classroom. The engaging standards-based activities cover grade-level skills with easy to follow instructions and an answer key to quickly assess student understanding. Each week students will explore a new topic focusing on map skills, applying information and data, and connecting what they have learned. Watch students build confidence as they learn about location, place, human-environment interaction, movement, and regions with these quick independent learning activities. Parents appreciate the teacher-approved activity books that keep their child engaged and learning. Great for homeschooling, to reinforce learning at school, or prevent learning loss over summer. Teachers rely on the daily practice workbooks to save them valuable time. The ready to implement activities are perfect for daily morning review or homework. The activities can also be used for intervention skill building to address learning gaps.

In many ecosystems dung beetles play a crucial role—both ecologically and economically—in the decomposition of large herbivore dung. Their activities provide scientists with an excellent opportunity to explore biological community dynamics. This collection of essays offers a concise account of the population and community ecology of dung beetles worldwide, with an emphasis on comparisons between arctic, temperate, and tropical species assemblages. Useful insights arise from relating the vast differences in species' life histories to their population and community-level consequences. The authors also discuss changes in dung beetle faunas due to human-caused habitat alteration and examine the possible effects of introducing dung beetles to cattle-breeding areas that lack efficient native species. "With the expansion of cattle breeding areas, the ecology of dung beetles is a subject of great economic concern as well as one of intense theoretical interest. This excellent book represents an up-to-date ecological study covering important aspects of the dung beetle never before presented."—Gonzalo Halffter, Instituto de Ecología, Mexico City Originally published in 1991. The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905.

Covers everything from earth sciences to astronomy; from climate and habitats to human arts and cultures; from ancient history to cutting-edge technology; and descriptions, flags, and statistics of all the countries in the world.

Discover earth's natural neighborhoods on a colorful trek through the twelve terrestrial biomes of North and South America. Travel from the icy tundra, where the polar bear makes its home, to the tropical rain forest, the natural home of more than thirty million kinds of insects. From mountains to prairies, rich, exquisite illustrations and fascinating facts present a detailed journey through earth's splendid natural homes.

Audisee® eBooks with Audio combine professional narration and sentence highlighting for an engaging read aloud experience! Take a walk in the tundra. In this cold, harsh biome at the top of the world, summer is short. Carpets of wildflowers and grasses bloom in the bright sunlight. An arctic fox pup catches sight of a lemming. The fox pup pounces The closer you look, the more life you see. Mosses, grasses, and wildflowers grow in the thin soil. Animals from bees to bears depend on the life growing in this chilly habitat Learn about this windy landscape though narrative text, crisp photos, and illustrations.

This far-reaching reference is designed with many entry points and a visually engaging format to satisfy the curious browser, the student researcher, and the earnest knowledge seeker alike.

Learn about the plants and animals in nine unique biomes with fun facts, engaging questions, and intricate illustrations. A biome is a naturally occurring community of diverse plants and animals. Explore your world top to bottom with Seek & Find Biomes to learn what makes each one totally unique and see if you can spot the recurring shapes hidden throughout the illustrations. Did you know that jaguars have been known to hunt in the Sonoran Desert? Or that the Amazon, the most powerful river in the world, is home to the unique pink river dolphin? Seek and find these creatures and many more in their natural biomes. A helpful glossary provides details for further discovery. Jorrien Peterson is one half of the husband/wife design duo Fell, focusing on design with a sense of place. Fell specializes in a minimal approach to illustration and believes there is beauty in simplicity. Jorrien ' s work has been featured in the Communication Arts Illustration Annual, the Association of Illustrators World Illustration Awards, the AIGA Salt Lake City 100 Show, Design Arts Utah, the Springville Museum of Art Spring Salon, and Stationery Trends. He lives in Salt Lake City.

Color Overheads Included! This book is a study of the factors which influence the relationships between living things and the environment. Special consideration is given to those human activities which adversely affect our environment. Each of the twelve teaching units in this book is introduced by a color transparency, which emphasizes the basic concept of the unit and presents questions for discussion. Reproducible student pages provide reinforcement and follow-up activities. The teaching guide offers descriptions of the basic concepts to be presented, background information, suggestions for enrichment activities, and a complete answer key.

Life Science for grades 5 to 8 is designed to aid in the review and practice of life science topics. Life Science covers topics such as classifying animals, plant and animal structures, life cycles, biomes, and energy transfer. The book includes realistic diagrams and engaging activities to support practice in all areas of life science. --The 100+ Series science books span grades 5 to 12. The activities in each book reinforce essential science skill practice in the areas of life science, physical science, and Earth science. The books include engaging, grade-appropriate activities and clear thumbnail answer keys. Each book has 128 pages and 100 pages (or more) of reproducible content to help students review and reinforce essential skills in individual science topics. The series is aligned to current science standards.
