This class is fundamental insofar as any finite group can be expressed as a subgroup of a symmetric group S_N for a suitable integer N , according to Cayley's theorem. Parallel to the group of symmetries of the square above, S_3 can also be interpreted as the group of

Group (mathematics) - Wikipedia

Every finite group can also be realized as the group of isometries of some compact hyperbolic surface. Similarly, it can be realized as the group of symmetries of a hyperbolic 3-manifold.
