At the end of October, a group of scientists from Canada, Germany, and the United States published a paper that marries the fields of genomics, public health and archeology. Led by Johannes Krause at the University of Tübingen, Germany, and Hendrik Poinder of McMaster University in Canada, the team reported they were able to sequence the full genome of the bacteria responsible for the Black Death, a plague that swept through Europe from 1347-1351, killing anywhere between 30 and 50 percent ...

### Dissecting the cause of the Black Death - Genome.gov

Abstract. The Black Death was the largest demographic shock in European history. We review the evidence for the origins, spread, and mortality of the disease. We document that it was a plausibly exogenous shock to the European economy and trace out its aggregate and local impacts in both the short-run and the long-run.
