"Manual lens" refers to both manual focusing and manual aperture setting. Yes, Aperture Priority mode will work with manual lenses. As you adjust the aperture ring on the manual lens, the camera will still be able to meter the light coming through the lens and automatically set the shutter speed accordingly.

Using Manual Lenses With the Fuji X System - Roy Cruz Photo

Don't use anything that could get hit by the mirror when it flips up. In the special case of a Canon-compatible manual "preset" lens (of which there must be many still floating around), the concept of "let [ting] the camera use the aperture it felt it saw" may be fairly meaningless. It will always think it sees the maximum aperture, won't it?

How to use 6D with manual exposure lenses? - Canon Community

Manual focus lenses, particularly from before the nineties, were built to be manually focused all the time. Therefore they are usually much smoother and more intuitive to use. Canon 50mm f/1.4 @ f/2
